PROPOSAL · BY MOTIU · NOT AN OFFICIAL CAMPAIGN SPACE

From one struggle's dossier to a campaign kit any territory can reuse.

A proposal by Motiu to turn this prototype, inspired by the Boicot ICL campaign, into an open, reusable system for communities fighting multinationals that damage their land. Shared early, to get your feedback before anything is built.

Working name: Arrel · A campaign kit for territories fighting extractive multinationals.

Read this first. The idea for the system is **Motiu**'s. The prototype is **inspired by the Boicot ICL group** and built with materials from its public dossier and website (**boicoticl.org**): it would not exist without their work. It is not an official campaign space and Boicot ICL has not endorsed it. AI is used for drafting and assembly; nothing is published without a source, and a person checks every figure. We do not know whether an equivalent tool already exists: a research phase is part of the proposal.

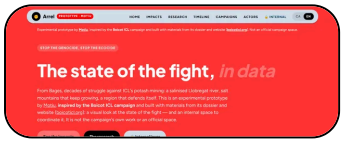

The problem WHY

Long struggles against big companies are fought by volunteers with PDFs, group chats and spreadsheets. Evidence is scattered. The public story is hard to keep current. And what a movement learns over years rarely travels to the next territory.

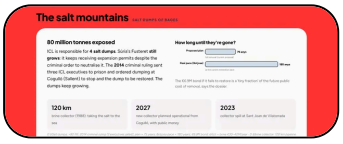

The proof: what already exists THE ICL PROTOTYPE

This prototype, built by Motiu, inspired by the Boicot ICL campaign and made with materials from its public dossier and website. It is what you are looking at.

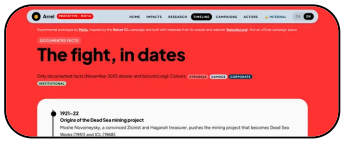

- ✔ 7 sections in 2 languages: 14 pages
- ✔ Sourced data visualisations
- ✔ A research library
- ✔ A struggle timeline
- ✔ Actor profiles (the relationship map is still to do)
- ✔ A demo internal coordination layer, with fake data
- ✔ One rule: every figure cites its source, and our own calculations are marked as derived

Home: the state of the fight, in data.

Charts: the salt dumps, with the source under each figure.

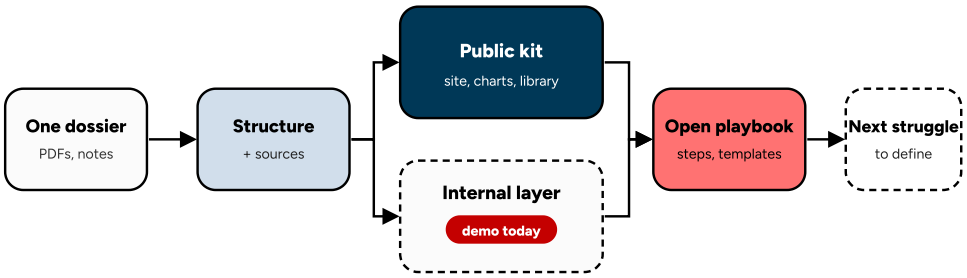

Timeline: documented facts only.

Internal layer: demo data, not real.

The system: three layers THE IDEA

LAYER 1 · FRONTEND

Public kit

A custom campaign website, quick and cheap to set up, that emphasises what each group wants. Data visualisations, a research library, a struggle timeline and actor mapping. The ICL prototype is the first instance.

EXISTS AS A PROTOTYPE

LAYER 2 · BACKEND

Internal layer

A private coordination platform: action board, evidence review queue, agenda and contacts. In the prototype it is a demo with fake data. Real access control is still to be decided with each campaign.

DEMO TODAY

LAYER 3 · OPEN

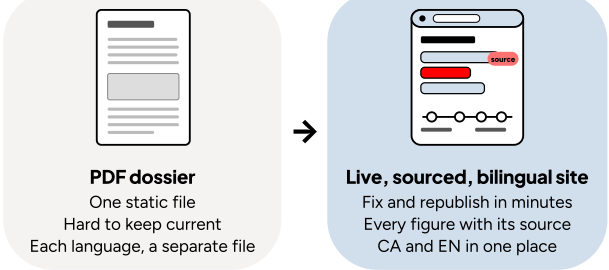

Open playbook

The process, templates and prompts, documented and published so other groups can reproduce it without Motiu. This is what makes it bigger than ICL.

TO BE WRITTEN

How AI fits

AI does the slow work: turning a PDF dossier into structured text, drafting pages, proposing charts. People decide. **Nothing is published without a source, and a person checks every figure.** Why now: the stack is mostly existing tools, so money and work go into assembling, testing, promoting and documenting. It could be done with fully open-source tools and no big tech; phase 1 is deliberately not purist (see the principles).

Principles HOW WE WANT TO WORK

1. **Open by default**
   Proposed, open to feedback: code under AGPL-3.0; playbook and docs under CC BY-SA 4.0. Campaign content stays the campaign's.
2. **Sources before claims**
   Nothing goes up without a source. Our own calculations are marked as derived.
3. **The campaign decides what is said in its name**
   We build the tool, not the message.
4. **Data stays with the campaigns**
   Each campaign owns its data and controls its use and hosting.
5. **Pragmatic first, open later**
   In phase 1 we test with whatever works and log each tooling choice. The goal is a fully open stack, including open-weight models, for those who require it.

What exists, and what we think is new AN HONEST LANDSCAPE

EJAtlas
Does: A collaborative atlas that documents and maps environmental conflicts worldwide.
Doesn't cover: As far as we know, it gives a campaign neither its own site nor a coordination space.

Mobilizon
Does: Federated platform (AGPL) for organising events and groups.
Doesn't cover: Built for gathering people, not for documenting a conflict with sources.

Mobilize
Does: Volunteer and event management used by political campaigns and non-profits.
Doesn't cover: Recruits volunteers; does not build a struggle's story or evidence base.

CiviCRM
Does: Open-source (AGPL-3.0) CRM for advocacy and non-profit groups: contacts, events, campaigns, petitions, mailings.
Doesn't cover: Not an evidence library or a public data site.

Action Network
Does: Email-driven tools for petitions, events, fundraising and contacting legislators.
Doesn't cover: Organises actions; not a sourced public record or research library.

Tech for Palestine
Does: A coalition that incubates open-source projects and tools for Palestine solidarity.
Doesn't cover: As far as we know, not a reusable kit for a territorial campaign.

We checked these from public descriptions only. If we got one wrong, tell us.

What we think is new: not any single piece, but the whole chain. An end-to-end assembly, AI-assisted, low-cost and repeatable, tailored to one struggle at a time, with an open playbook. We do not know whether an equivalent exists. **A research phase would test that belief.**

Phase 1: scope and ask INDICATIVE, FOR DISCUSSION

About €5–10k, for discussion

A first prototype can be built with this. The money would go to Motiu (a non-profit worker cooperative) and possibly others, or be held in another container. Not decided.

No fundraising is open. Who holds any funds (Motiu cooperative or a fiscal host) is undecided.

- ✔ v1 of the kit, run with Catalonia / Bages as first instance
- ✔ Groundwork for connecting with other anti-ICL struggles
- ✔ The research on existing tools
- ✔ Playbook v0, documenting the real steps followed for ICL: dossier to markdown, knowledge base, figures registry, site, deploy
- ✔ Everything published under open licences

Possible next fronts UNCONFIRMED

- **Catalonia · Vall del Bages.** The first instance and the test.
- **Boulby, North York Moors (UK).** The Boulby mine, run by Cleveland Potash, an ICL subsidiary. (source)
- **Dead Sea (Israel).** Reuters reports ICL's concession expires in 2030, with a government tender planned (6 Nov 2025). (source)

Second struggle to define together

No commitments are implied. These are for the people on the ground to decide.

What we need from you FIVE QUESTIONS

1. Would this help your struggle? What is missing?
2. What would make you trust it, or not?
3. Which layer first: public kit, internal layer or playbook?
4. Where do your red lines sit on AI, hosting and data?
5. Who else should see this?

Contact: motiu.org. “Arrel” is a working title. Suggestions welcome.
